

Server Test:

1. Download the test script from: <http://kmsaucion.com/servertest.zip>.
2. Unzip the file and upload it (servertest.pl) to your servers cgi-bin folder in **ASCII mode**.
3. CHMOD the file to 755.
4. Run the script: <http://yourdomain.com/cgi-bin/servertest.pl>
5. Have your ISP install any missing modules. (script will indicate missing modules)
6. A server that has all the necessary modules will show the following:

Testing for required modules ...

Data::Pageset [makefile] [DATA-PAGESET] ... Ok!

File::Spec [makefile] [FILE-SPEC] ... Ok!

Storable [makefile] [STORABLE] ... Ok!

CGI [makefile] [CGI] ... Ok!

Encode [makefile] [Encode] ... Ok!

MIME::Base64 [makefile] [MIME-BASE64] ... Ok!

Digest [makefile] [DIGEST] ... Ok!

Digest::MD5 [makefile] [DIGEST-MD5] ... Ok!

Authen::Captcha [makefile] [AUTHEN-CAPTCHA] ... Ok!

CGI::EncryptForm [makefile] [CGI-ENCRYPTFORM] ... Ok!

Crypt::SSLeay [openssl] [OPENSSL|CRYPT-SSLEAY] ... Ok!

GD [makefile] [GD] ... Ok!

Time::Local [makefile] [TIME-LOCAL] ... Ok!

Crypt::HCE_SHA [makefile] [CRYPT-HCE_SHA] ... Ok!

LWP::Simple [makefile] [LIBWWW] ... Ok!

DBI [makefile] [DBI] ... Ok!

URI [makefile] [URI] ... Ok!

Net::FTP [makefile] [LIBNET] ... Ok!

Digest::SHA1 [makefile] [DIGEST-SHA1] ... Ok!
